

## Voice and Database update

These instructions include description of two steps. You can run these two updates separately.

- A) Voice update
- B) Database update

### Voice update

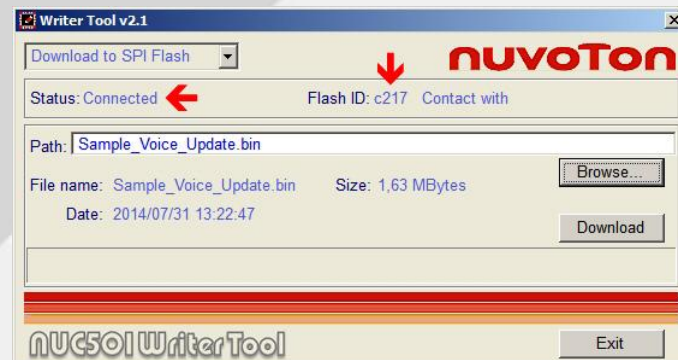

1. Download the Voice update from TrueCam Website ([www.truecam.eu/firmware/](http://www.truecam.eu/firmware/)), open the unpacked folder and run the file “**TrueCam\_Voice\_Update\_Tool.exe**”. Voice update application displays a window (see below):

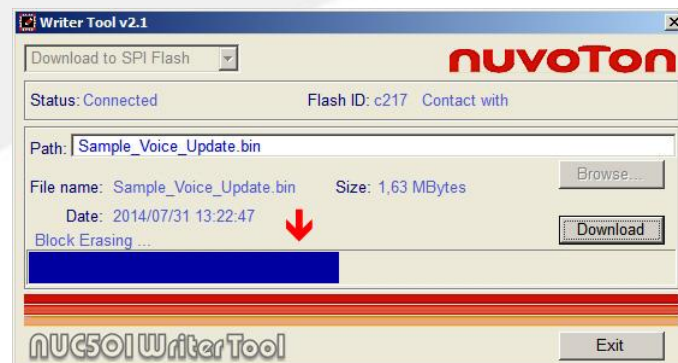

2. Connect the TrueCam Speed Camera Module with TrueCam DVR Mount. Connect update USB cable with sticker “**For Update**” with TrueCam DVR Mount and your computer (see below):

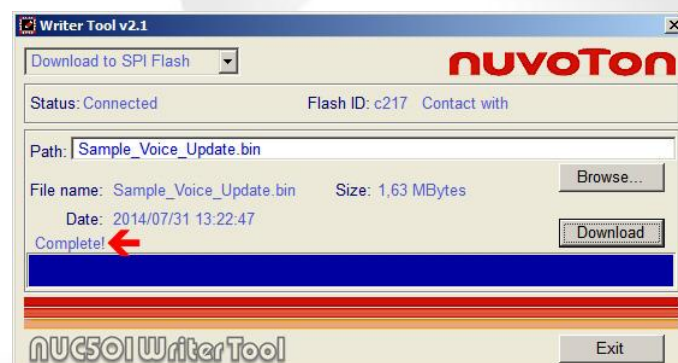

3. If the connection is successful, the status “**Connected**” and Flash ID “**c217**” appears (see below):

4. Click the “**Download**” button to begin Voice update, progress bar moves until finished (see below):

5. Voice application displays “**Complete!**” after successful Voice update (see below):

6. Close the Voice update application, unplug the update USB cable from your computer and from the TrueCam DVR Mount module.

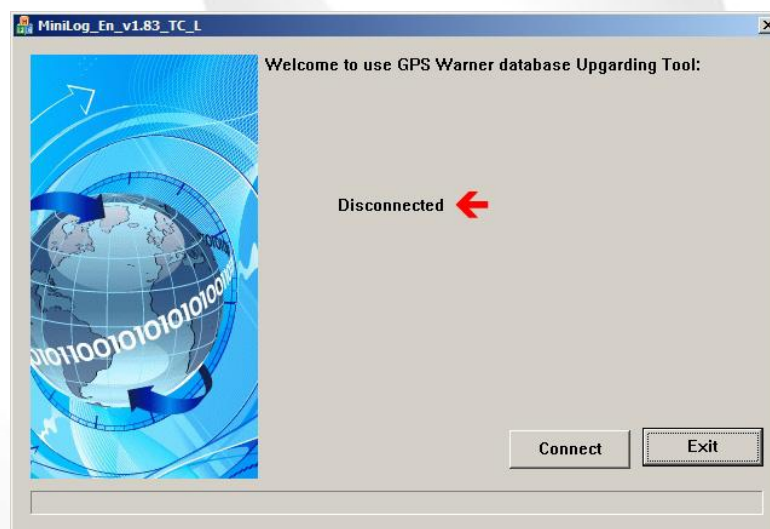

**The Voice update is finished.**

## Database Update

1. Plug the TrueCam Speed Camera Module directly into your computer USB port.
2. Download the Database update from TrueCam Website ([www.truecam.eu/firmware/](http://www.truecam.eu/firmware/)), open the unpacked folder and run the file “**TrueCam\_Database\_Update\_Tool.exe**”. Database update application displays a window (see below):

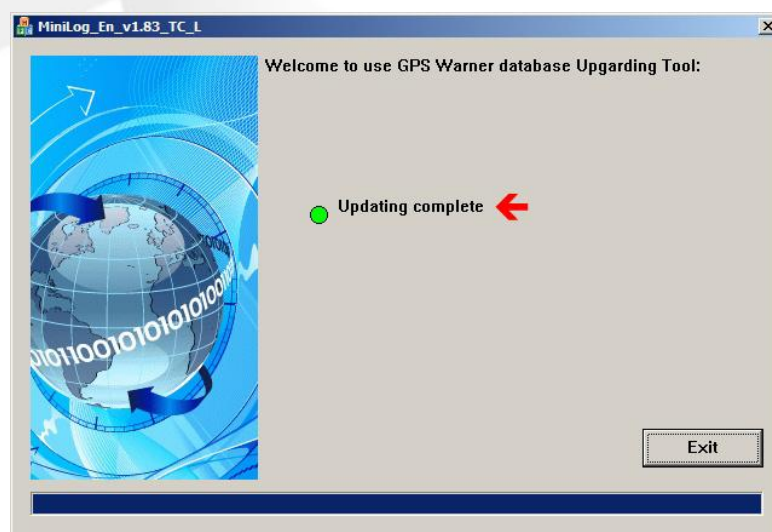

If your USB connection doesn't work , the software shows status “**Disconnected**”. Check the connection between TrueCam Speed Camera Module and your computer and click the “**Connect**” button.

3. When the Database update starts, the progress bar moves until finished (see below):

4. Application displays "**Updating complete**" after successful Database update (see below):

5. Close the Database update application and unplug the TrueCam Speed Camera Module from your computer.

**The Database update is finished.**
